GRRR

By Thenatan

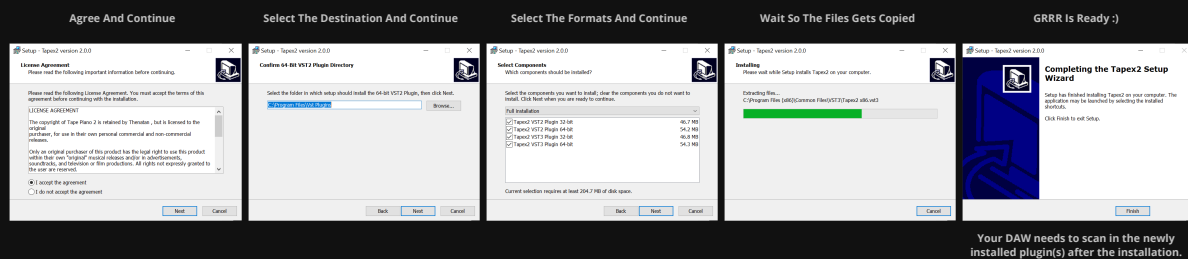

Installation on Windows

Installing Thenatan plugins on Windows is simple and guided by the installer.

- 1-Open the installer file for your plugin (**GRRR 1.0.0.exe**).
- 2-Windows may ask if you want to run the file – click Yes or Run.
- 3-Follow the installer instructions on the screen.
- 4-Choose the folder where you want the plugin installed.
- 5-Select the components you want to install and click Next.
- 6-Wait for the files to copy, then click Finish.
- 7-Open your DAW and check:
 - Instruments** section for synth or instrument plugins
 - Effects** section for FX plugins
- 8-Rescan plugins in your DAW if needed.

Your plugin is now ready to use!

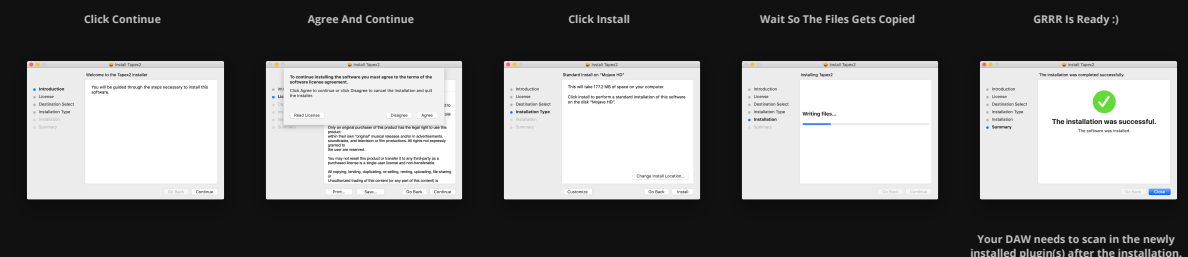

Installation on macOS

Installing Thenatan plugins on Windows is simple and guided by the installer.

- 1-Right-click (or Ctrl+click) the installer file (**GRRR 1.0.0.pkg**) and select Open.
- 2-If you see a warning, click Open to continue.
- 3-Follow the installer steps on-screen.
- 4-Choose the plugin formats to install (VST, AU, etc.) and click Continue.
- 5-Wait for the files to copy and click Finish.
- 6-Log out and back in to complete installation (sometimes required).
- 7-If macOS blocks the installer via Gatekeeper:
 - Go to **System Preferences > Privacy & Security**
 - Locate the blocked application and click **Allow Anyway**
- 8-Open your DAW and check:
 - Instruments** section for synth or instrument plugins
 - Effects** section for FX plugins
- 9-Rescan plugins in your DAW to make sure the new plugin appears.

Your plugin is now ready to use!

"Important"

- For Mac Users A **"Logout"** Is Necessary After The Installation.
- GRRR Will Show Up As **"Thenatan / GRRR"** On Your Instruments List.

Red: Demo Mode
Green: Activated

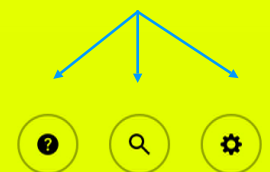

GRRR

How To Activate

Input trim before the beat-detection and all four engines. Raise it if quiet sources aren't opening the mouth.
Output level after the limiter.

Shows or hides the tooltips.
Opens the preset browser.
Opens the settings page.

SUB

Octave-down weight under the blend - the chest of the monster.
Tracks the input's bass note.

DENSE

How big the monster is. Scales drive, sweep depth, resonance and gating together across all four engines.

Bypasses the whole plugin - the raw input passes through untouched.
Overall dry/wet for the whole plugin.

Plugin size - drag to zoom in or out, Ctrl+click to snap back to 100%.

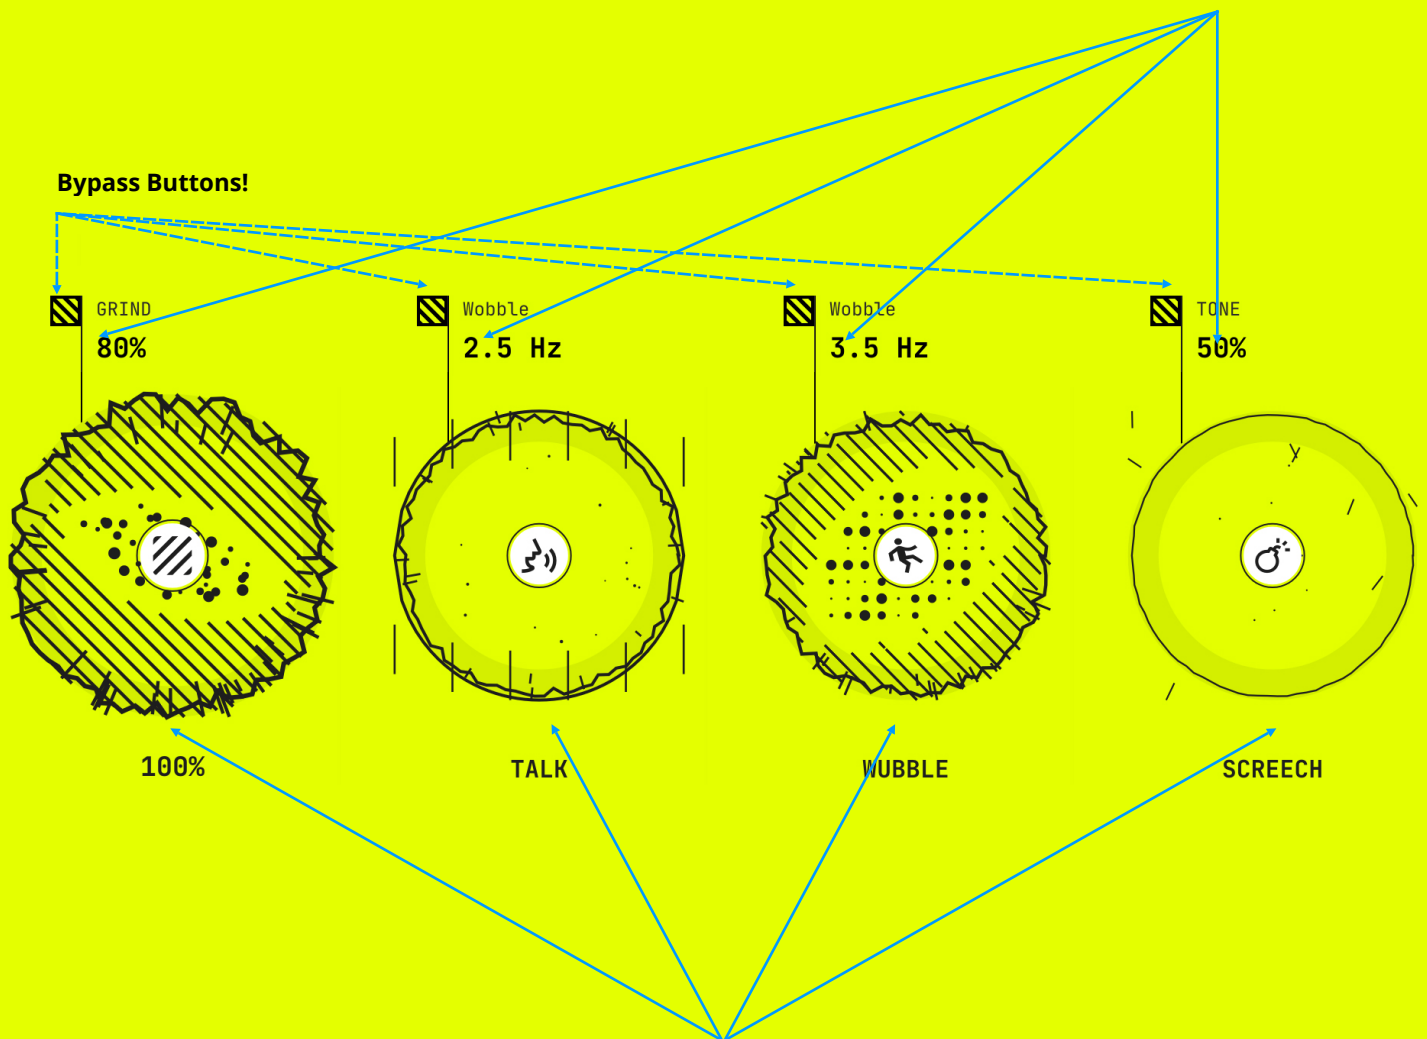

J

How nasty TRASH gets. Drives the wavefolder, decimator, ring-mod depth, throat rattle, and brightness all at once
- 0 is a dark growl, 1 is shredded.

The mouth's resting talk speed. The beat accelerates it up to 4x on hits, then it slurs back down.

The wobble's LFO rate.

The laser's pitch and bite. Sweeps low growl to high scream, and tunes the metallic resonator to match.

TRASH Mix - pours shredded, wavefolded filth over your sound. Crank it until it stops being music.

TALK Mix - how much the monster gets to speak. Turn it up and your bass grows a mouth.

WUB Mix - feeds the wobble. More knob = louder AND wider filter sweeps, so it wakes up fast.

SCREECH Mix - unleashes the laser. A little cuts through the mix, a lot melts faces.
