IMPORTANT COMPATIBILITY NOTE!

Our Revolutionary New Opus Software Engine

Our brand new Opus software engine has been years in development, and replaces the Play engine. All EastWest Libraries (with the exception of the original Hollywood Orchestra, the original Hollywood Solo Instruments, and the MIDI Guitar Series) are supported in Opus, allowing them to take advantage of a faster, more powerful, more flexible, and better looking software engine.

Opus comes with some incredible new features such as individual instrument downloads, customized key-switches, new effects for the mixer page, scalable retina user interface upgrades for legacy products, a powerful new script language, and many more features that allow you to completely customize the sound of each instrument.

It's one of the most exciting developments in the history of our company and will be the launching pad for many exciting new products in the future.

Using Opus and Play Together

Opus and Play are two separate software products, anything you have saved in your projects will still load up inside the saved Play version of the plugins. You can update your current/existing projects to Opus if you so choose, or leave them saved within Play.

After purchasing or upgrading to Opus you do not need to use Play, but it may be more convenient to make small adjustments to an older composition in your DAW loading the instruments saved in Play instead of replacing them with Opus. For any new composition, just use Opus.

A Note About User Manuals

All EastWest Libraries have their own user manuals (like this one) that refer to instruments and controls that are specific to their respective libraries, as well as referencing the Play User Manual for controls that are common to all EastWest Libraries.

For EastWest Libraries supported for use within Opus, we highly recommend taking advantage of all the powerful new features it has to offer.

Reference this user manual for details related to the instruments and controls specific to this library and, in place of the previously mentioned Play Software Manual, refer to the Opus Software Manual from the link below instead.

OPUS SOFTWARE MANUAL: https://media.soundsonline.com/manuals/EW-Opus-Software-Manual.pdf

1. Welcome

Welcome

About EastWest

EastWest (www.soundsonline.com) has been dedicated to perpetual innovation and uncompromising quality, setting the industry standard as the most critically acclaimed producer of Sample CDs and Virtual (software) Instruments.

Founder and producer Doug Rogers has over 30 years experience in the audio industry and is the recipient of many recording industry awards including "Recording Engineer of the Year." In 2005, "The Art of Digital Music" named him one of "56 Visionary Artists & Insiders" in the book of the same name. In 1988, he founded EastWest, the most critically acclaimed sound developer in the world, and recipient of over 50 industry awards, more than any other sound developer. His uncompromising approach to quality, and innovative ideas have enabled EastWest to lead the sound-ware business for 20 years.

In 1997 Rogers partnered with producer/composer Nick Phoenix and set up Quantum Leap, a wholly owned division of EastWest, to produce high-quality, no-compromise sample libraries and virtual instruments. Quantum Leap virtual instruments are mostly produced by Nick Phoenix. Some of the larger productions, such as Symphonic Orchestra, Symphonic Choirs and Quantum Leap Pianos are co-produced by Doug Rogers and Nick Phoenix. As a composer, Phoenix began scoring film trailers and television commercials in 1994. To date, he has either scored or licensed music for the ad campaigns of over 1000 major motion pictures including Tomb Raider 2, Terminator 3, Lord of the Rings Return of the King, Harry Potter 2, Star Wars Episode 2, Spiderman 3, Pirates of the Caribbean 3, Blood Diamond, Night at the Museum, and The Da Vinci Code. Quantum Leap has now firmly established itself as one of the world's top producers of high-end sample libraries and virtual instruments.

In 2006, EastWest purchased the legendary Cello Studios (formerly United Western Recorders) on Sunset Boulevard in Hollywood, re-naming it EastWest Studios. The 21,000 sq. ft. facility, since remodelled by master designer Philippe Starck, houses five recording studios and is the world headquarters for EastWest.

Producer: Doug Rogers

Doug Rogers has over 30 years experience in the audio industry and is the recipient of many recording industry awards including "Recording Engineer of the Year." In 2005, "The Art of Digital Music" named him one of "56 Visionary Artists & Insiders" in the book of the same name.

In 1988, he founded EastWest, the most critically acclaimed sound developer in the world, and recipient of over 50 industry awards, more than any other sound developer. His uncompromising approach to quality, and innovative ideas have enabled EastWest to lead the sound-ware business for 20 years. In the late eighties, he released the very first commercial drum sample CD, and followed it with the multiple-award-winning "Bob Clearmountain Drums" sample collection.

In the years that followed he practically reinvented the sound-ware industry. EastWest introduced loop sample libraries to the market in the early nineties, followed closely by the first midi-driven loops (Dance/Industrial). He released the first sample library to include multiple dynamics, followed by the first sample library to stream from hard disk, an innovation that led to the detailed collections available today. His recent productions of Symphonic Orchestra (awarded a Keyboard Magazine "Key Buy Award," EQ Magazine "Exceptional Quality Award," Computer Music Magazine "Performance Award," and G.A.N.G. [Game Audio Network Guild] "Best Sound Library Award"); and Symphonic

Choirs (awarded Electronic Musician "2006 Editor's Choice Award," G.A.N.G. "Best Sound Library Award," and Keyboard Magazine "Key Buy Award"). He persuaded audio legend Prof. Keith O. Johnson to record EWQLSO and EWQLSC, and came up with the revolutionary idea of recording all instruments and voices with 3 simultaneous stereo mic setups so users can control the tone of the performances and the acoustics of the concert hall, as well as create surround sound mixes.

His latest productions include Quantum Leap Pianos, another 3 mic setup, and the most detailed virtual piano collection ever produced; and Fab Four, inspired by the sounds of the Beatles, featuring the same kind of vintage instruments and original EMI/Abbey Road recording equipment as the Beatles used to create their music. He persuaded audio legend Ken Scott, who was involved in the recording of five Beatles albums, and engineer for "Magical Mystery Tour" and "The Beatles" (also known as the White Album) to work with him on Fab Four.

He also acquired one of Hollywood's most famous recording studio complexes in 2006, formally United Western (now EastWest Studios), recipient of more engineering awards and RIAA certified Gold and Platinum recordings than any other studios worldwide. He persuaded top international design superstar Philippe Starck to redesign the non-technical areas of the studios. Over the last decade he has partnered with producer/composer Nick Phoenix and set up the Quantum Leap imprint, a subsidiary of EastWest, to produce high-quality, no compromise sample libraries and virtual instruments. EastWest/Quantum Leap virtual instruments are considered the best available and are in daily use by the who's who of the industry.

His latest technical achievement was unveiled at the 2007 NAMM convention - the world's first 64-bit audio engine named PLAY, which powers EastWest/Quantum Leap's latest suite of virtual (software) instruments.

Producer: Nick Phoenix

Nick began scoring film trailers and television commercials in 1994. To date, he has either scored or licensed music for the ad campaigns of over 1000 major motion pictures. "Rendition," "Spider-Man 3," "Golden Compass." "The Assassination of Jesse James," "Pirates of the Caribbean 3," "Babel," "Hitman," "I Am Legend," "300," "No Country For Old Men," "Harry Potter 5," "The Brave One," "Wall-E," "Blood Diamond," "Speed Racer," and "Night at the Museum" are a few recent examples. Nick and Thomas Bergersen founded the ultimate trailer music company "Two Steps From Hell" in 2006. www.twostepsfromhell.com.

Nick has also scored numerous TV shows for NBC, CBS, Showtime, and Fox. "In Pot We Trust," a Showtime original film, is playing in the fall of 2007.

The journey as a composer has also inspired Nick to record and program his own sounds and samples. Nick founded Quantum Leap Productions in 1997 and Quantum Leap has since grown to be the world's top producer of high-end virtual instruments. A 10-year partnership with Doug Rogers and East West has yielded countless award winning software titles such as Stormdrum, Symphonic Orchestra, Symphonic Choirs, RA, Voices of Passion, Ministry of Rock, Gypsy, QL Pianos, VOTA, QL Brass, QL Guitar and Bass, Hardcore Bass, Goliath, and Colossus.

Nick's studio is located in Venice, California, and is 100% solar powered.

How to Use This and the Other Manuals

All documentation for the EastWest PLAY Advanced Sample System and its libraries is provided as a collection of Adobe Acrobat files, also called PDFs. They can be viewed on the computer screen or printed to paper.

Each time you install one of the PLAY System libraries, two manuals are copied to the file system on your computer:

- The manual that describes the whole PLAY System. This, the largest of the manuals, addresses how to install and use all aspects of the software that are common to all libraries.
- The library-specific manual, such as the one you are currently reading. This smaller document describes aspects that differ from one library to the next, such as the list of included instruments and articulations.

Using the Adobe Acrobat Features

By opening the Bookmarks pane along the left edge of the Adobe Acrobat Reader, the user can jump directly to a topic from the section names. Note that some older versions of Acrobat Reader might not support all these features. The latest Acrobat Reader can be downloaded and installed at no cost from the Adobe web site. (As an example of a hyperlink, you can click on the last word of the previous sentence to be taken directly to the Adobe site.)

When reading this and other manuals on the computer screen, you can zoom in to see more detail in the images or zoom out to see more of the page at once. If an included picture of the user interface, or a diagram, seems fuzzy or illegible, then zoom in using one of several means provided in the Acrobat Reader software.

Online Documentation and Other Resources

For the most up to date information, visit the support pages at EastWest's web site. There you can find:

- information made available after these manuals were written
- FAQ pages that may already list answers to questions you have
- suggestions from EastWest and other users of the EastWest PLAY System
- news about upcoming releases

The address is:

2. Quantum Leap Goliath, An Overview

Quantum Leap Goliath, An Overview

The Design Point For the Goliath Library

Quantum Leap Goliath is an extension of Quantum Leap Colossus, the first, super high quality, complete sound set ever created. This new and expanded library includes hundreds of instruments. It is a massive 40-gigabyte (not megabyte) virtual instrument that covers all of the basic musical genres, the way a keyboard workstation attempts to, except Goliath offers much higher quality than any keyboard available today.

Quantum Leap Goliath now uses the EastWest PLAY Sample Engine, which can run on a Macintosh computer or a Windows PC, and on both 32-bit and 64-bit platforms. Read more about that system in the PLAY System Manual, which accompanies this one.

Quantum Leap Goliath is an indispensable tool that you will reach for time and time again when nothing else works. It will become your Swiss army knife of composing. Plus, it's General MIDI compatible! You can expect the usual EastWest/Quantum Leap quality in Goliath.

Even if you own some of these instruments in other packages, you will love this collection. A good example is the Fender Rhodes. Despite the fact the Rhodes has been successfully sampled many times, Goliath includes a unique vintage-sounding Rhodes you won't find anywhere else.

Like its predecessor Colossus, Quantum Leap Goliath includes 17 Gigs of new sounds recorded at Ocean Way Studio B (24-bit), a 2 Gig piano recorded in Europe, and 15 Gigs from the award-winning range of Quantum Leap and EastWest titles, all newly programmed for Colossus and Goliath with superior sound quality due to the features and improved audio quality of the included EastWest PLAY Sample Player.

Goliath builds on Colossus by adding the PMI Bosendorfer 290 piano and many other instruments, a total of 8 GB of new samples.

Programming is kept very simple, and programs that utilize the Mod Wheel are labeled appropriately. All programs have CC11 (MIDI Control Code 11) as an additional volume control. Many programs utilize auto-alternation of samples, also called round-robin technology, for added realism.

For touring musicians, this is the ultimate instrument to have on the road or in a club. Goliath has incredible instruments of every type (check out the complete list in Chapter 4). For song-writing, filmscoring, multi-media production, in the studio, or on stage, Quantum Leap Goliath has you completely covered.

See the Quantum Leap Goliath product page at www.soundsonline.com for a list of which instruments are new—that is, were not in Colossus—as well as other information about this product.

What's Included

This Quantum Leap Goliath library you purchased includes all the following:
- a complete set of sample-based instruments, enumerated later in this manual
- approximately 40 Gigabytes of 24-bit, 44.1 kHz samples
- the EastWest PLAY Advanced Sample Engine
- the unique authorization code that identifies the license you bought
- manuals in Adobe Acrobat format for both the EastWest PLAY System and the Quantum Leap Goliath Virtual Instrument
- an installation program to set up the library, software, and documentation on your computer
- an Authorization Wizard for registering your license in an online database

One required item *not* usually included is an iLok security key. If you already have one from an earlier purchase of software, you can use it. Otherwise, you need to acquire one. They are available from many retailers that sell EastWest and Quantum Leap products, or you can buy one online at www.soundsonline.com.

Hardware Requirements

See the PLAY System manual for a complete list of the Hardware and Software Requirements for installing and running any PLAY System library. In addition, the available space on the hard drive required for a full installation of Goliath is approximately 40 GB (Gigabytes).

3. The Quantum Leap Goliath User Interface

The Quantum Leap Goliath User Interface

Each library presents its own interface when one of its instruments is the current one, as specified in the Instruments drop-down in the upper right corner. The image at the bottom of the page provides an overview of the entire window when in Player View.

Much of this interface is shared by all PLAY System libraries, and the common features are described in the PLAY System manual. The controls described here are:
• Round Robin Reset
• Stereo Double
• Filter
• ADT
• the graphical representation of the Envelope

Round Robin Reset Button

A round robin articulation is one in which several different samples are recorded with all parameters, such as volume, speed of attack, and so on, being essentially constant. The PLAY Engine then knows to alternate between the two or more samples during playback. The goal is to avoid what's often called the "machine gun effect," in which playing the same sampled note repeatedly causes the unnatural sound of consecutive notes being mechanically identical.
There's one potential problem with round robin technology, and one way to solve it is the Round Robin Reset button. The PLAY Engine remembers which sample should be played the next time the note sounds. If, for example, a round-robin patch contains two samples, A and B, and a piece uses that note 7 times, the PLAY Engine plays A B A B A B A. If the piece is played again from the beginning, the engine will play starting with B, because that's next in order. The second rendition will be subtly different. Being able to reset all round-robin articulations to the beginning of the cycle allows for consistent playback.

You can use this button to reset all round robin articulations on demand. Or use your choice of a MIDI note or MIDI control code to reset them one instrument at a time from a MIDI keyboard or the data stored in a sequencer project. See the description of the Settings dialog for more information about this articulation-specific approach.

Stereo Double Controls

This knob, with its three buttons, gives the user the option of using exclusively the left stereo signal or right when "Stereo" is selected from the Channel Source drop-down. For any other setting, this control has no effect.
The knob lets the user determine the spread of the signals, how far apart the ear perceives the stereo channels to be. A value of 0% brings the two channels together at the center (unless the Pan knob positions the output differently), and is the equivalent of turning off the controls with the button below the knob. A value of 100% call for the maximum spread available. Select between the left and right signal with the buttons on either side of the knob.

Filter Controls

The Filter controls take the sound of the instrument, and modify it by filtering out some of the sound above a certain frequency. This type of effect is commonly called a Low Pass Filter.

The Frequency knob determines where the sound starts to be filtered out. The Resonance knob specifies how much the filter "rings" at the dialed frequency. The higher the resonance knob is set, the more focused this ringing becomes.

The graph gives you visual cues about the frequency distribution you are creating with the settings you select.

ADT Controls

Artificial Double Tracking is a technique, invented at Abbey Road when the Beatles were recording there, that approximates the effect of double tracking (recording two nearly identical takes of a vocalist or instrument on the same part and laying one on top of the other) without actually taking the time to record two takes. And some would say ADT improves on actual double tracking even beyond the savings in time. The original ADT process was based on magnetic tape; in the PLAY Engine, the effect is created digitally. The software programmers, however, added a tape simulator to mimic the slight speed variations of the two analog tape machines that created the ADT effect.
The **Delay** knob specifies in milliseconds, the delay between the original signal and the secondary signal. A delay of around 40 ms is typical, so is often a good starting point when crafting a specific effect.

The **Depth** knob specifies the amount by which that delay is modulated. You don't want an exactly consistent delay; the delay of the secondary signal will vary forward and backward in time by this much.

The **Speed** knob varies the speed at which that delay is modulated.

The **Level** knob specifies the relative loudness of the secondary signal. Set it to 0.0 dB to hear the effect at its strongest, with the same level on both signals; higher or lower gives preference to one of the signals. The overall effect depends on their combination.

The **On/Off** button allows you to kill the ADT effect instantly and then reinstate it with the same settings, as needed.

The Graphical Representation of the Envelope

The Envelope Controls are described in the main PLAY System manual because they are common to all PLAY System libraries. Only some libraries include the graph, as shown here, so it is included in the manuals for those libraries only.

Note that the total width of the graph represents the total length of all phases of the envelope. Therefore, when you change something in one part of the graph, for example, the decay, you may see the slopes of other components, the attack and the release, change as well because those phases become a larger or smaller percent of the whole; this is as expected.

The Browser View

The Browser behaves identically among all PLAY System libraries. Read the main PLAY System manual for information about how to use that view.

4. Collections and Instruments

Collections and Instruments

This chapter provides specific information about each of the instruments in the Goliath library. First is a section that lists the several collections that appear in the Browser. This is followed by a series of tables that provide for each collection a table of the available instruments. Be sure to read the notes before each table for some hints about usage. You might want to print out the pages containing these tables as a reference.

Organization of the Goliath Collections

The Goliath library is organized into the following collections based on the type of instruments included. In the Browser window of the EastWest PLAY System, you will see the following folders when you select "Goliath" from the Favorites pane. The indented names are subfolders that appear when the containing folder is selected. The numbers in parentheses are the numbers of instruments in each collection.

- Acoustic Drumkits (17)
- Acoustic Guitar Family (11)
- Choir Bank
    › EWQL Choirs (10)
    › Men's Choir (5)
    › Soloists (6)
    › Women's Choir   (7)
- Electric Bass and Upright (15)
- Electric Guitar (50)
- Electronic Drumkits (26)
- Ethnic Percussion (9)
- Ethnic Pitched (42)
- GM Bank
    › 001-8 Piano (8)
    › 009-16 CromPerc (8)
    › 017-24 Organ (8)
    › 025-32 Guitar (8)
    › 033-40 Bass (8)
    › 041-48 Strings (8)
    › 049-56 Ensemble (8)
    › 057-64 Brass (8)
    › 065-72 Reed (8)
    › 073-80 Pipe (8)
    › 081-88 Synth Lead (8)

- › 089-96 Synth Pad (8)
- › 097-104 Synth Effects (8)
- › 105-112 Ethnic (8)
- › 113-120 Percussive (8)
- › 121-128 Sound Effects (8)
- Keyboard Mallet Instr (15)
- New Age Ensembles (19)
- Orchestra (39)
- Pianos E. Pianos (24)
- PMI Bosendorfer 290 (2)
- Pop Brass
  - › 3 Saxes (1)
  - › 3 Trumpets (9)
  - › Alto Sax (8)
  - › Bari Sax (6)
  - › Bone (10)
  - › Flugel Horn (1)
  - › Salsa Trumpet (5)
  - › Soprano Sax (2)
  - › Tenor Sax (9)
  - › Trumpet (23)
  - › Tuba (2)
- Stormdrone MOD
  - › 4 way high morphs (11)
  - › 4 way low morphs (12)
  - › 4 way low to high morphs (48)
  - › Stormdrum Lost Rhythms (6)
- Synth Bass (14)
- Synth Leads (11)
- Synth Pads (38)
- Vintage Organs (25)

Tables of the Instruments

The following tables, presented in two columns per page, list all the instrument files of Quantum Leap Goliath. They are organized in the same order as in the list above, starting on the next page.

Note that some instruments have "FX" at the end. This means on-board Goliath effects have been added to those programs. It would have been done for the whole library, but the effects are so CPU-intensive, it would cause trouble on less capable computers. So sounds were chosen that can best use the effects. The programs with no added effects are in the library as well.

Acoustic Drumkits

All kits in the first table are GM kits (General MIDI) that auto-alternate between left- and right-hand hits. For hi-hats, the pedal hat closes the open hat. In some kits, the pedal hat is on Bb below the kick drum. See a later table for electronic drumkits.

Pianos E. Pianos

The Fazioli F308 is the largest and most expensive piano they make. It was recorded in a famous hall in Europe. The Steinway B is the full version of EastWest Steinway B. Everything else is newly recorded material.

The Fender Rhodes is a Mark V Suitcase with the Chuck Monte Upgrade recorded through its original amp and speaker and appears courtesy of Don Griffin.

The GS-1 is the first FM keyboard ever made. Only 100 were ever produced. It cost $14,000 in 1981. Nick Phoenix first became interested in the GS-1 as a teenager watching Brendt Midland play it with the Grateful Dead. Other famous GS-1 users were, Stevie Wonder, Toto, Jerry Goldsmith and Vangelis.

Stormdrone MOD

This folder contains atmosphere instruments derived exclusively from heavily processed ethnic, orchestral, and sound effects samples. The loops are roughly 60 seconds long and the possibilities are endless.

In these instruments, the Mod Wheel controls a 4-way crossfade.

If a note name (e.g., C3) is provided, that's the note at which the sample was originally taken. The closer the playback to this note, the better the sound quality.

In the Stormdrum subfolder, the number in the name refers to the beats-per-minute (bpm) of the rhythm.

Abbreviations Used in Instrument Names

The names of instruments are often shortened to fit in the instrument list in the Browser View. The following table provides a way to look up any unfamiliar abbreviations until you become familiar with the shortcuts.

ABBREVIATIONS IN INSTRUMENT NAMES	
Abbreviations	**Full Words**
exp	expressive
ft	flutter tongue
fx	effects
leg	legato
mf	mezzo-forte (half loud)
mp	mezzo-piano (half soft)
MOD	controlled by Mod Wheel
nv	non-vibrato
rr	round robin (auto-alternation)
stac	staccato
sus	sustain
vib	Vibrato

EASTWEST/QUANTUM LEAP LICENSE AGREEMENT

EASTWEST END USER LICENSE AGREEMENT: Please read the terms of the following audio samples License Agreement before using these audio samples. By opening the packaging and installing these audio samples, you agree to become bound by the terms of the License Agreement. If you do not agree with the terms of the License Agreement, do not open the packaging or use these audio samples. East West Sounds, Inc. ("Licensor") guarantees that all of the samples with these discs have been created and recorded specially for this project, and any similarity to any other recording is unintentional. 1. The audio samples recorded with these discs remain the property of Licensor and are licensed, not sold, to you for use with your sampling software or equipment. 2. A right to use the enclosed sounds is granted to the original end-user of the product (Licensee) and is NOT transferable. 3. The Licensee may modify the sounds. LICENSEE MAY USE THE SOUNDS FOR COMMERCIAL PURPOSES WITHIN MUSICAL COMPOSITIONS. 4. The following terms apply to the use of loops (compositions that contain a combination of sound samples that can be repeated to form a continuous piece of music) used in 'music or production libraries' that are relicensed to multiple third parties. (1) Loops must be used in a musical context with at least two other instruments that contribute significantly to the composition. (2) The entire loop cannot be left exposed at any time in the composition. (3) If you have any doubts a composition meets this criteria, you may submit it to licensing@eastwestsounds.com for written approval. Please do not send audio or MP3 files, send us a link to your composition on your web server. 5. This license expressly forbids resale, relicensing or other distribution of these sounds, either as they exist on these discs, or any modification thereof. You cannot sell, loan, rent, lease, assign, upload to or download from any server, or transfer all or any of the enclosed sounds to another user, or for use in any competitive product. 6. Licensor will not be responsible if the contents of these discs does not fit the particular purpose of the Licensee. If in doubt over usage, please contact East West Sounds, Inc. by fax: (USA) 323-957-6966 or email: licensing@eastwestsounds.com.
