Introduction

If you're a big fan of our **killer plug-in – Pumper**, then you shouldn't miss out on these series of **insane plug-ins**. Helper plug-ins are designed to be a **superb mixing tools** which are vital to bring your music mixing game to the next level. It doesn't matter that you use it on **individual channels or groups** or the master channel, it guarantees to bring good results to your music.

Give your music an opportunity to **stand out** from the rest with these **simple-to-use yet versatile** plug-ins as we have carefully designed them to ensure that they are worth it and bring magical results to your song.

How to use

Equalizer

Helper Equalizer is a unique and versatile equalizer plug-in that contains special features with excellent workflow and a simple-to-use user interface. Unlike any other equalizer plug-in, you'll get to play with 5 different EQ shapes to shape your sound better.

Features:

- **Clean up the mud in your mix**
- **Get crispy high end on your leads**
- **5 filter modules to get creative on sound design**

Saturator

Helper Saturator is an audio effect VST plugin professionally designed to apply saturation to the audio signal. Helper Saturator is not just a simple saturation plug-in, it also comes with 2 filter features, 2 types of saturation modules and ability to be able to process 5 different types of audio signal.

Features:

- **Tube distortion**
- **Tape distortion**
- **Low Pass and High Pass filters to get creative**

Transient

Helper Transients is much more than an ordinary transient shaper plug-in because it can process 5 different kinds of audio signal from the audio source itself. This means that the user can set it to affect only the original audio source, the mid, the side, the left or the right of the audio source. This brings up a new realm of possibilities.

Features:

- **Clean transient processing**
- **Low Pass and High Pass filters to clean up the sound**
